Machine Function Introduction

1. Equipment features

- The spindle drive adopts servo motor drive, which is more precise, efficient, powerful, and noise reducing.
- The wiring system adopts a servo stepper motor intelligent automatic control system, and the equipment will automatically count and accurately wire the wiring according to the requirements. During the winding process, it can be paused or jogged at any time.
- Powered by a 220V single-phase source, convenient for use in various locations.
- The winding tension is controlled by an electromagnetic motor, ensuring stable force.
- It has automatic operation, foot pedal speed regulation, and power-off memory function.
- Adopting the latest microcomputer Chinese LCD display, with multi-stage cable density adjustment.
- The machine head can automatically move forward and backward, up and down, making it more convenient to lift and lower the iron core.
- Winding and wrapping can work separately or simultaneously, increasing efficiency.

2. Core Technical Parameters

Winding method	Gear type
Finally completed outer diameter	350-1500mm
Maximum completion height	350mm
Suitable winding diameter range	1-7mm
Single machine final completion inner diameter	150mm
Dual machine final completion inner diameter	1500mm
Dual machine final completion inner diameter (additional)	400mm
Width of storage loop	20-50mm
Maximum speed	120 revolutions per minute
Working voltage	220V/50Hz
Pre-programmable program	50×20 group
Total weight	960kg

FACTORY:

We-KIOXIA LIGHT RING EQUIPMENT GROUP CO.,LTD. has 28 years of experience in winding machine lines. Our KIOXIA series (including the KX3B-L model) is equipped with ISO9001:2015 and CE certifications, proprietary machine patents, and the qualification of a government-recognized "high-tech enterprise".
